

New Jersey Environmental Disclosure

For Electricity Supplied from June 1, 2017 to May 31, 2018

Electricity can be generated in a number of ways with different impacts on the environment. The standardized environmental information shown below allows you to compare this electricity product with electricity products offered by other electric suppliers. The data shown below are default values and do not necessarily reflect the energy that Champion will supply.

Champion relied on these energy resources to provide the electricity product.

ENERGY SOURCE	PERCENT
Coal	32.20%
Gas	26.70%
Hydroelectric (large)	1.10%
Nuclear	35.90%
Oil	0.20%
Renewable Energy Sources Subtotal	3.90%
<i>Captured methane gas</i>	<i>0.30%</i>
<i>Fuel cells</i>	<i>0.00%</i>
<i>Geothermal</i>	<i>0.00%</i>
<i>Hydroelectric (small)</i>	<i>0.00%</i>
<i>Solar</i>	<i>0.20%</i>
<i>Solid waste</i>	<i>0.50%</i>
<i>Wind</i>	<i>2.60%</i>
<i>Wood or other biomass</i>	<i>0.30%</i>
Total	100%

AIR EMISSIONS

The emission data given are default values and represent the average amount of air pollution associated with the generation of electricity in the region. This amount is compared to the New Jersey benchmark. The benchmark approximates the average emission rate for all electricity generation in New Jersey.

CO₂ is a "greenhouse gas" which may contribute to global climate change. NO_x and SO₂ react to form acids found in acid rain. NO_x also reacts to form ground level ozone, an unhealthy component of "smog."

SOURCE	CO2 (LB/MWH)	NOX (LB/MWH)	SO2 (LB/MWH)
PJM System Mix	947.59	0.62	0.74
NJ Benchmark	598.00	.33	0.08

ENERGY CONSERVATION

Champion is not investing in energy conservation measures for this electricity product.

Energy conservation measures means less electricity needs to be generated and pollution is avoided.

AVOIDED GENERATION	AVOIDED AIR EMISSIONS
0 kWh	0 tons CO ₂
	0 tons NO _x
	0 tons SO ₂
